

Closed System

- * We use the closed system vs. open system for reasons of improved safety and comfort. It allows us to adjust pressure and temperature to each client's need.
- * All of the speculums and tubes are disposable.
- * We stay in the room with you at all times during the session.
- * You shall be covered at all times during a session with proper draping.
- * During your session, we will coach you to relax and allow the body to hydrate . It's more likely that you will release in the bathroom after the hydration where you have privacy.
- * The water being used is filtered via ultraviolet light, carbon filtering and sediment filters.
- * The equipment has safety features built into it to ensure that the pressure never exceeds 2 pounds per square inch (the FDA recommended safety limit).
- * The equipment shall be cleaned and disinfected between every client with a hospital grade product that is FDA cleared.
- * Each client is required to see their doctor to be screened for contraindications prior to their sessions.
- * All of our therapists are certified or in training for certification by a reputable organization (www.i-act.org) and receive a minimum of 100 hours of course work.
- * All of our therapists have peer support (other health care providers) to help them with things they may not understand or be in a position to handle. We pride ourselves on creating a collaborative work & learning environment with other therapists, teachers or doctors available for guidance.
- * Our philosophy is to promote education in a safe and comfortable space where healing may unfold for each person in their own time and in their own way. We value diversity and honor each person's unique gifts and talents, learning from these differences. Our only goal is client comfort and safety.
